CONFIDENTIAL — PARTNER BRIEF

Prodally Development Proposal: Strategic Gap Assessment

Comparison of Prodally's 21-page Mobile & Web App Development Proposal against the live LingAfriq Flutter production codebase (v1.6.2+330).

Prepared for LingAfriq partners · 5 September 2026

32	11+	■22M	RN≠Flutter
Domains compared	In-app / missing from SOW	Quoted total (excl. VAT/AI)	Stack mismatch

Recommendation

Do **not** accept the Prodally proposal as written. It under-scopes the live product, prices greenfield work against features already shipping, and uses a Change Request clause (page 11) that can exclude any screen not explicitly listed. Require a rewritten SOW with Flutter continuity and a preserve-and-extend Appendix A before any deposit.

1. Context

Prodally proposes a 22–26 week engagement covering (1) Member Mobile App premium layer, (2) Community/Content/Offline, and (3) Admin & Content Console, totaling ■**22,000,000** (Modules ■12M / ■5.5M / ■4.5M), excluding VAT, hosting, and AI inference. The proposal references LingAfriq's Strategic Overview (1 September 2026) and early traction metrics. Contact: john@prodally.com.

LingAfriq's production client is a mature **Flutter** application with ~262 screen files, a 42-type game catalog, multi-mode Polie AI, LiveKit classrooms, Socket.IO social surfaces, offline sync, RevenueCat subscriptions, and extensive cultural/heritage modules. There is no full in-app CMS admin in the Flutter client; admin work is legitimately net-new if integrated with the existing backend at admin.lingafriq.com.

2. What is useful in their proposal

• Correct freemium thesis: premium tools, coaching, community, offline, admin, monetization.
• Admin console, institutional licensing, tutor marketplace booking, and revenue/AI-cost dashboards are real business gaps.
• Itemized module pricing and optional retainership (■0.5–1.0M/mo) are commercially readable.
• Recognition of AI cost control, dialect scale, and trust & safety as key risks.

3. Critical risks

3.1 Stack mismatch

The commercial offer staffs a **Frontend Developer (React Native)** against a production **Flutter** codebase. That is a rewrite posture, not an extend posture. A dual-client migration would require a separate multi-phase budget, far beyond ■22M and 26 weeks.

3.2 Change Request trap (page 11)

Prodally states that any screen, flow, integration, or feature not explicitly documented—including AI model selection and telco/CSR partnership integrations—falls outside scope and requires a formal Change Request. Combined with a thin feature list, this lets large product pillars (games, personas, Snap/X/WA social, passport) be excluded from “done” while Module 1–2 fees are still collected for work that overlaps existing capabilities.

3.3 Rebuild billing risk

Module 1 (■12M) names translation, pronunciation, Phrase DNA, Living Dictionary, AI coach, live classrooms, villages/tribes chat, and offline—capabilities that largely already exist. Without a preserve-and-extend obligation, LingAfriq risks paying greenfield rates for re-implementation while unprotected surfaces regress or disappear.

3.4 Scope contradictions

Telco/CSR readiness is marketed in the project overview, then treated as out-of-scope / CR on page 11. The title says “Web & Mobile,” but learner web is not clearly SOW’d—only a React Admin console is clearly priced.

4. Domain coverage matrix

Status key: **MISSING** = in production app, not protected by SOW · **PARTIAL** = vaguely referenced · **NAMED** = listed but rebuild risk · **NET-NEW** = legitimate new work · **STACK MISMATCH** = Flutter vs React Native.

Domain	In current app	In Prodally SOW	Coverage
Auth, profile, settings, biometrics	Login/signup, verify, biometrics, secure storage, privacy, delete account, dark mode, i18n	Not itemized	**MISSING**
Onboarding & placement	Multiple onboarding flows + placement quiz/test	Implied via personalization only	**PARTIAL**
Curriculum / Authentic Path	Lessons map, A1–C1 authentic path, certificates, bundled CMS, history & mannerisms	Offline packs + cultural/history (high level); admin course mgmt	**PARTIAL**
Grammar / vocab / skill practice	Grammar hub, flashcards, listening/writing, speak missions, tone drills, SRS	Lumped under language tools	**PARTIAL**
Living Dictionary & Phrase DNA	Shipped in app	Named in Module 1	**NAMED (rebuild risk)**
Dialect customization	Dialect preference + variant picker	Named in Module 1	**NAMED (rebuild risk)**
Translation (Polie / Live / Offline)	Multi-path translation stack already live	Real-time translation & dictionary upgrade	**PARTIAL**
Pronunciation / African TTS / STT	African TTS, scoring, tone detection, pitch viz, ASR game scorer	Pronunciation & rhythm coaching	**PARTIAL**
Polie AI tutor (multi-mode)	Translation, Tutor, Roleplay, Vocabulary, Review + hybrid orchestrator	AI chat coach (one line)	**PARTIAL**
Historical personas & missions	26 personas + mission flows + safety/assessment	Not mentioned	**MISSING**
Human tutor marketplace	Not a full booking marketplace today	Discovery, booking, session management	**NET-NEW**
Live classrooms (LiveKit)	Classroom, lobby, notes, queue, roster, assignments	Scheduling & attendance	**NAMED (rebuild risk)**
Practice / conversation rooms	Practice room setup, collaborative LiveKit sessions	Role-play / guided conversation rooms	**PARTIAL**
Games catalog	42 registered game types + Flame/Rive infrastructure	Not mentioned	**MISSING**
Gamification systems	Hearts, quests, seasonal events, magic items, ancestral tree, leagues, tribe wars	Streaks/XP/badges extended; leaderboards; challenges	**PARTIAL**
Villages & Tribes	Hub, maps, market/cafe/elder hut, Tribe vs Tribe, tribal duel	Language Village + My Tribe	**PARTIAL**
Chat (global / tribe / private)	Socket.IO chats, WA-style DM, call history, @Polie, moderation	Global chat + private messaging + reporting	**PARTIAL**
X-style community feed	Home, compose, explore, lists, notifications, profiles	Not mentioned	**MISSING**
Snap + WA status social	Snap inbox/camera/stories; WA status; starred/media	Not mentioned	**MISSING**
Social audio rooms	Discovery, create, following, moderation, scheduled	Not mentioned	**MISSING**
Micro-mentor + staff reports	Peer mentoring hub/session + staff moderation	Not mentioned	**MISSING**
Offline / sync v2	Hive, Workmanager, selective sync, outbox, conflict resolution, encrypted cache	Offline access & downloadable packs	**PARTIAL**
UGC / import media / native review	UGC hub, create lesson/quiz/story, import media, voice contribution	UGC + imported media named	**NAMED (rebuild risk)**

Domain	In current app	In Prodally SOW	Coverage
Culture magazine & FLB heritage	Magazine + FLB heritage archive	Cultural/history/heritage (high level)	**PARTIAL**
Point & Say (ML Kit)	Camera object → speak word	Not mentioned	**MISSING**
Passport credentials	Proctored session + credential screens	Not mentioned	**MISSING**
Subscriptions (mobile)	Tier UI + RevenueCat + family dashboard	Freemium/monetization + admin tier config	**PARTIAL**
Admin & content console	No full CMS admin in Flutter client	Full Module 3 priced	**NET-NEW**
Institutional licensing & telco/CSR	Not productized	Marketed in overview; page 11 may exclude telco/CSR	**NET-NEW / CONTRADICTORY**
Observability & security	Sentry, certificate pinning, telemetry, health checks	Not in build scope	**MISSING**
Client platform / stack	Production Flutter app (Riverpod, LiveKit, Socket.IO, Hive, Firebase)	Frontend Developer (React Native)	**STACK MISMATCH**
Learner Web App	Mobile-first Flutter today	Title says Web & Mobile; only Admin React clearly scoped	**PARTIAL**

5. Highest-priority omissions (must attach as Appendix A)

• **Games catalog** — 42 registered types including cultural and traditional board/card games.
• **Polie multi-mode workspace** — Tutor / Roleplay / Vocabulary / Review / Translation, not a single “AI chat coach.”
• **26 historical personas + persona missions** with safety and assessment.
• **Social upgrades** — X-style feed, Snap stories, WA status, social audio rooms.
• **Passport** proctored credentials; **Point & Say** (ML Kit); micro-mentor + staff reports.
• **Gamification depth** — hearts, seasonal events, magic items, ancestral tree, Tribe vs Tribe.
• **Hardening** — Sentry, certificate pinning, sync v2/outbox, African TTS stack.

6. Commercial opinion

As priced, Module 1 heavily overlaps shipping capabilities. Module 3 Admin (■4.5M) is the clearest net-new value *if* integrated with the current backend rather than replaced blindly. The 22–26 week timeline is plausible only for a narrow premium/admin slice—not for owning the full current product surface. Retainership form is reasonable; it does not fix an under-scoped build contract.

7. Recommended partner actions

• Reject acceptance of the PDF as the binding SOW.
• Issue a counter-package: Flutter continuity mandate + Appendix A inventory + acceptance matrix.
• Reprice as three workstreams: (A) harden/extend existing Flutter mobile, (B) admin console upgrade, (C) net-new marketplace/licensing.
• Require Prodally to demonstrate fluency in the current repository before kickoff payment.
• If they insist on React Native or refuse Appendix A: confine engagement to Admin-only, or decline.
